

Make currency of knowledge an everyday experience for your business with the Smarter SMSF learning package.

This comprehensive, in-depth suite of online learning resources enables practitioners to stay at the forefront of the SMSF industry – whether you want to be the expert or not, you can rely on our specialist knowledge to ensure that you are enabling better retirement outcomes for your clients.

Years of experience as practitioners and educators showed us that what practitioners want from a training model is the ability to learn without taking time away from their business. Our learn package does just that. Because it is delivered via our online platform, practitioners can get exactly what they need for compliance without leaving their own office or losing focus on their clients.

Smarter SMSF offers every type of training – from face to face events to webinars – and were the first in the industry to provide online learning underpinned by a comprehensive SMSF course structure.

Our web-based live training is particularly popular because it enables members to access it whenever they like and as many times as they like. Fully mobile responsive, this cost effective application works on any device so it is also available for practitioners on the go. It accommodates people

who want to watch it individually or collectively as part of team training events.

And because our learn package is available anytime, it is perfect for reviewing and refreshing knowledge. Simply watch at your own pace then take the quiz to confirm your progress and CPD points.

Smarter SMSF offers regular updates on SMSF specialist topics, sourced directly from leading industry professionals such as accountants, financial planners and lawyers. Every quarter we share 'the changing face of SMSF' – a technical and regulatory update that keeps members informed on key compliance issues as they arise.

All training is accredited for professional development obligations via the SMSF Association, FPA Australia and the major accounting bodies. We also maintain a CPD register that our members use to determine the ongoing knowledge strengths of their staff.
